

v-beam

A base for flexibility

The Veyhl range of beam systems furniture frames has a solid base i.e. **v-beam**, the Veyhl beam system. It not only incorporates decades of experience but a whole gamut of flexibility with the most varying options along with an optimum capacity for storage and a whole range of parts. **v-beam** distinguishes itself through its exceptional robustness – the cross section allows for an easy and tool free attachment of a wide range of accessories. Furthermore, and this is the most important feature of **v-beam**, it can be combined with a whole host of additional peripheral parts thanks to different joint systems:

1. **v-beam**. The result of many years of experience – the beam as a functional “backbone”
2. **ecco.basis**. Aluminium die-cast joint for the attachment of different types of leg frames
3. **A2.basis**. Aluminium casting, joint and top support in one
4. **solo.basis**. steel joint with integrated top support

v-beam – a stable base for a whole host of design possibilities.

ecco-business

ecco business can be summed up as follows: unobtrusive but with a clear design, visually elegant without losing any of its stable properties. This frame is the ideal base for a work place, which just needs to fulfil that role. The different standardised lengths of the tabletop supports and connecting elements allow for a whole range of **ecco business** table configurations, including a corner solutions.

Veyhl

v-beam

ecco trend

ecco trend fits the mood of the times without any unnecessary frills. **ecco trend** is the ideal frame for architecture, which seeks to create space for creativity, clarity and communication. The gentle shape of the leg frame harmonises with its environment whilst losing nothing of its individualism. **ecco trend**: aesthetics and function in an ideal combination.

Veyhl

v-beam **ecco trend mobil**

ecco trend mobil was especially developed for all those who have a particularly high requirement with regard to flexibility and mobility. The casters enable it to be transported quickly from place to place whether to meetings, team discussions, etc., without it losing any of its robustness.

Veyhl

v-beam

ecco loft

Modern architecture is taking over from traditional design – modern work places no longer greatly differ from state of the art homes. New forms of living and working require constructive solutions such as **ecco loft**. A four legged frame, that fully incorporates all the advantages of beam systems, lots of leg room and a quick and easy assembly, simple to transport and taking up the minimum of room, which all in all go to making **ecco loft** a real genius. The integrated height adjustment facility, which extends by 100 mm, makes the frame even more flexible with regard to utilisation possibilities.

Veyhl

v-beam

A2 business s

The supporting aluminium crown-piece in the A2 series brings together a whole host of advantages. In the case of work places measuring up to 1,600 x 800 mm no further table top supports are required, stable screw-on connections for the side parts to the crown-piece, and a quick and easy option of connecting them to the **v-beam** due to the fact that the side parts are delivered pre-assembled – and that's not all!

A2 business is a genuine classic, which is available if required, with a convenient height adjustment facility which can be operated by a press-button.

Veyhl

v-beam

A2 business as

The **A2 business as** C-shaped leg frame was developed to create even more legroom and includes all the advantages of the A2 series. Furthermore, the frame offers an excess of comfort and convenience without making any sacrifices to stability.

Veyhl

v-beam

A2 A

When there is a question of special requirements with regard to aesthetics and function at an interesting price performance ratio, **A2 A** is the right solution. A side part that does not just correspond to the mood of the times but also sets standards with regard to stability and can even be used as a conference table.

Veyhl

v-beam

solo ellips

solo ellips is not a loner but rather an individual. A conscious reduction leaving the functions which are necessary in the day to day office routine coupled with the usage of proven components from the Veyhl-standard programme all make **solo ellips** a financially speaking exceedingly interesting alternative to other more lavish systems. In other words, here is a frame that has been needed for a long time...

Veyhl

v-beam

solo basic

A conscious decision to get back to the essentials (both in design as well as in function), a high degree of stability, the option of many standard accessories...and all that to a very reasonable price performance ratio ...**solo basic** is true to the principle of "less being more". Your clients will thank you - and not just for the fact that it can be quickly assembled (here too, the leg frames are delivered pre-assembled)...

Veyhl

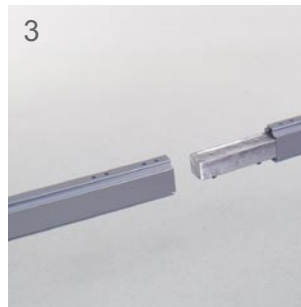

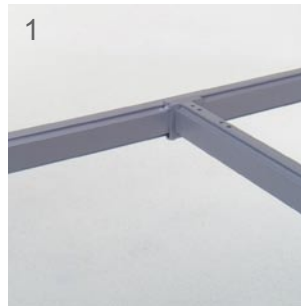

v-beam

v-beam accessories

The entire range of the **v-beam**-series is rounded off by a broad spectrum of accessories – the result of many years' experience and in depth knowledge of the market.

This begins with the system beam:

1. brackets for rigid 90° connections – these can be moved along the cross beam
2. hinge with or without supporting leg for use with corner workstations
3. linear connections with screws for extending the beam (possible at a later date)...
4. ... or which can be used to attach additional components on the periphery of the table top.

v-beam

Frame accessories

Accessories should ideally be orientated to requirements and not to fashion. However, its even better if both factors can be amalgamated as is the case in the range of accessories available for the frames in the **v-beam** series.

Here are just a few examples:

1. support for perforated metal or wooden modesty panel
2. height adjustable support for standing extensions
3. printer table support
4. outside CPU rack for all the usual computer sizes
5. inside CPU rack

Veyhl

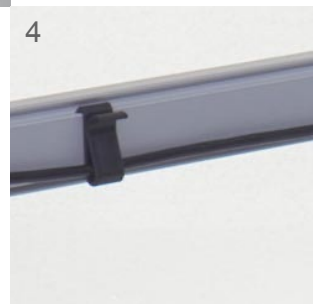

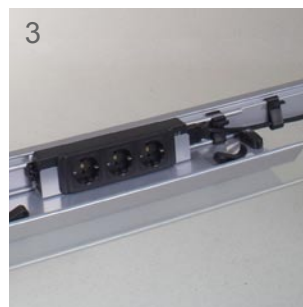

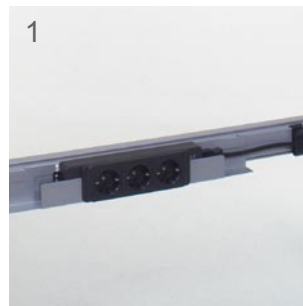

v-beam

Cable management accessories

Nothing is more annoying and dangerous than the proverbial spaghetti junction of cables lying on the floor. This is remedied by the **v-beam**-series cable management.

1. socket carrier, which can be assembled without using any tools
2. cable tray with integrated cable clamps and socket carrier
3. high volume hinging cable tray
4. Clips for an easy laying of the cables along the beam.
5. Double, vertical cable cover for **ecco business** – simply clip on between the tubular legs...
6. ...in exactly the same manner as the simple, vertical cable channel for the **A2 business**...
7. ...or the other easy alternative: the **solo** clip-on cable channel.

If you have any further requests just contact us – we are open to any suggestions!

v-beam

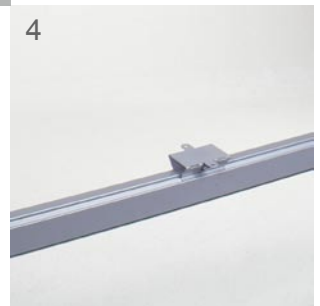

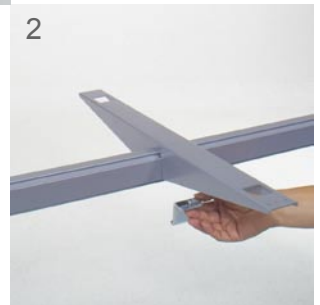

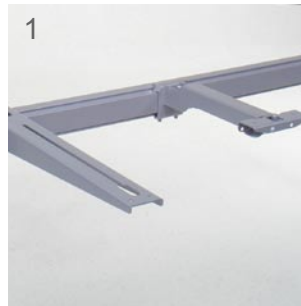

Assembly of table tops

If something can be done simply, then that is precisely how it should be done. This is something we have taken very much to heart and applied to the top supports...

For example...

1. ...in the case of the sliding top for the **A2 business as**, a design combined with the cable tray to form an ideal and flexible form of cable management, ...
2. ...or with the table top support that is securely screwed onto the top, yet can still be freely moved along the v-beam...
3. ...or alternatively by means of the quick fix brackets which allow for a quick assembly on location.
4. and last but not least: the top support bracket offers additional support if the beam system is extra long.

If you have any suggestions, or are on the look out for further solutions or wish to maintain or expand your lead on the market, talk to Veyhl – your partner for well-engineered solutions.
